

ETL FAILURE ROOT CAUSE ANALYSIS REPORT

Generated On

30-06-2026 00:18:30

Pipeline Status

FAILED

Current ETL Error

Duplicate Customer ID

Retrieved Historical Incidents

Incident 1

Category: Data Quality

Error: Missing Email

Root Cause: Source data issue

Fix: Validate source file

Incident 2

Category: Schema

Error: Schema mismatch

Root Cause: Column renamed

Fix: Update ETL mapping

Incident 3

Category: Database

Error: Database timeout

Root Cause: VPN outage

Fix: Restart VPN gateway

Retrieved Runbook

Category: Primary Key

Troubleshooting Guide

Check duplicate keys. Enforce uniqueness constraints. Deduplicate source records.

LLM Root Cause Analysis

Here is the analysis of the ETL failure:

Pipeline Status: Failed

Category: Data Quality

Severity: Medium

Confidence: High

Root Cause: Duplicate Customer ID, likely due to source data issue (similar to Incident 1)

Recommendations:

1. Validate source file to ensure duplicate customer IDs are not present.
2. Enforce uniqueness constraints on the target table to prevent duplicates from being written.
3. Review and deduplicate source records to resolve the root cause of the issue.

Note: The retrieved runbook suggests checking for duplicate keys, which aligns with the observed error.
